1. Introduction

1.1.Purpose

The purpose of this document is to present the description and the various requirements of the Cosmo Click application, intended for the cosmetology venture "MaGaby Home Spa", which will improve its management and organization.

This document is addressed mainly to all members responsible for the project, chiefly the owner of "MaGaby Home Spa", the developers who are also in charge of the analysis, design, development, and testing of the application (Code Crafters), and the instructor involved in evaluating the application. Its purpose is to serve as a basis for understanding the business needs and to guide software development for future updates or maintenance.

1.2.System Scope

The system, called Cosmo Click, is an application that will perform the following functions:

- Register clients, view their appointments, and maintain their history and diagnostic records.
- View the service catalog (facial, body, and hair) with its price, duration, and discounts.
- Schedule, confirm, and cancel appointments, view the location, and send reminders.
- Manage products and inventory, with expiration control, availability, and low-stock alerts.
- Register sales with their receipt and associated payments, including amount validation and refunds.
- Generate payment reports filtered by method and status.
- Assign staff (employees) the management of appointments, inventory, and sales according to their role.

This version of the program will not issue digital invoices related to the SRI (Ecuador's tax authority); it will only record payments and generate the corresponding report.

The system aims to improve the management and organization of «MaGaby Home Spa» in areas such as clients, appointments, services, products, sales, and inventory, thereby optimizing the handling of this information and reducing the time spent on administrative tasks, the loss of information, and outdated data.

1.4.Definitions, Acronyms, and Abbreviations

SRS: Software Requirements Specification

IEEE 830: Recommended practice for software requirements specifications

FR: Functional requirement

NFR: Non-functional requirement

Cosmetologist: Owner or employees who serve clients and manage the business, specializing in skin care, body treatments, hair care, and nail care.

Diagnostic record: Record of a client's health history, skin type, and treatments

MVC: Model–View–Controller

Inventory/Catalog: Record of the products and materials available at the business.

1.5.References

• IEEE Std 830-1998, IEEE Recommended Practice for Software Requirements Specifications.

• "Cosmo Click: Finding Objects, then classes, then model".

• Class diagram and use case diagram of the "Cosmo Click" project.

• CosmoClick Product Backlog

1.6.Document Overview

The document follows the IEEE 830 structure and is divided into four sections: Introduction, General Description, Specific Requirements, and Appendices. The second section describes the product in general terms (perspective, functions, users, constraints, assumptions, and future requirements). The third section details the specific requirements (interfaces, functions, performance, design constraints, and system

attributes). Finally, the fourth section contains the appendices and complementary documentation related to the project.

2. General Description

2.1.Product Perspective

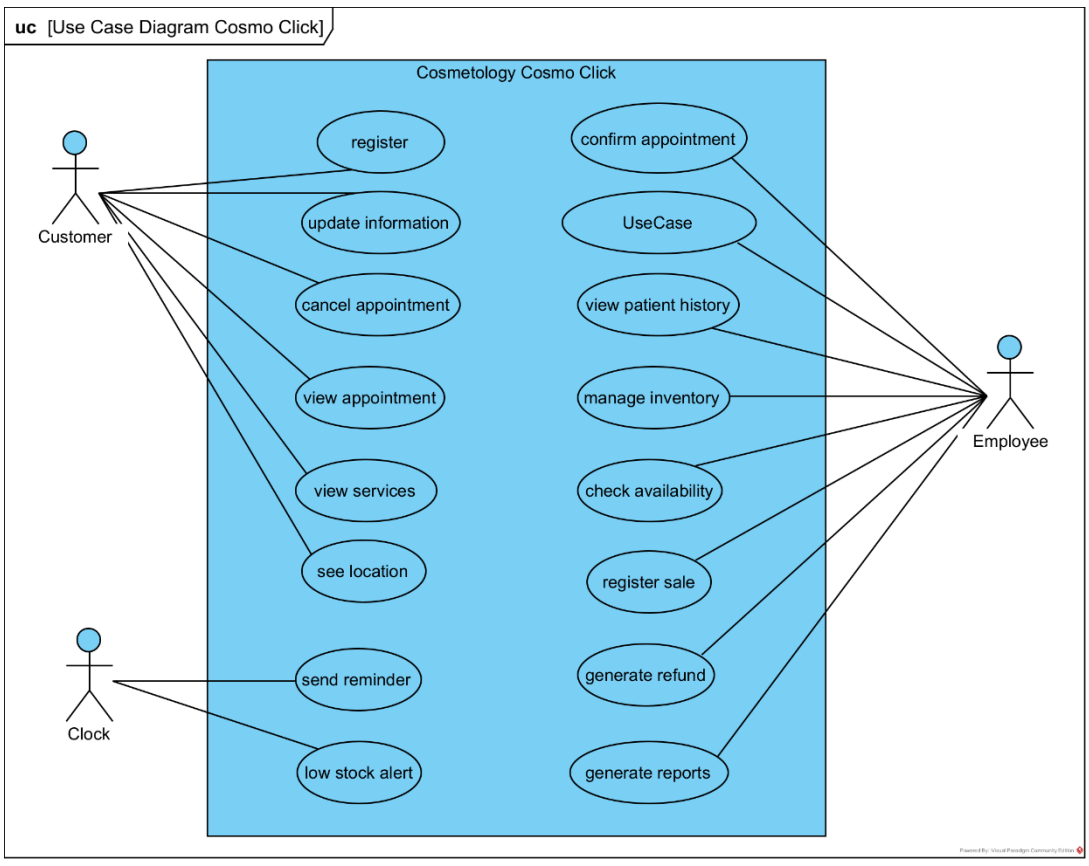

The cosmetology venture «MaGaby Home Spa» currently offers various beauty services and sells personal care products. The company handles its advertising and customer service through various social media platforms (Instagram, Facebook, WhatsApp). It also chooses to manage its products, services, and inventory manually.

This management method makes administrative tasks very time-consuming and increases the risk of information being lost or becoming outdated, which could negatively impact the business in the future.

For this reason, Cosmo Click will be a new application aimed at improving the administration of MaGaby Home Spa by optimizing the information related to clients, appointments, aesthetic services, products, sales, and inventory. Social media will continue to be used for advertising; the system complements it, not replaces it.

It is developed in Java with Maven in Apache NetBeans, with an MVC architecture (controller, model, and view packages), and includes a total of 15 classes specified in the class diagram.

2.2.Product Functions

2.3.User Characteristics

User type	Owner/Administrator
Training	Cosmetologist
Activities	Performs various skin and body care treatments, schedules and manages appointments.

User type	Employees
Training	Assistants with knowledge of cosmetology treatments
Activities	Helps perform various skin and body care treatments, schedules and manages appointments.

User type	Client
Training	Unknown
Activities	Consumption of the products and services offered by the cosmetology business.

2.4.Constraints

- The application must focus on the management activities of MaGaby Home Spa described in the project document.
- Payment is limited to bank transfer; it has not been established that the system will connect directly to a financial institution.
- Clients' health data is sensitive and must be protected as established by Ecuador's Organic Law on Personal Data Protection.
- Budget and time are limited by the academic context and by a small venture.
- Services, prices, products, and stock must be registered and kept up to date by authorized persons.
- The development platform, programming language, and storage system must be defined according to the project's technical decisions.

2.5.Assumptions and Dependencies

- MaGaby Home Spa will provide accurate and up-to-date information about the services, prices, products, and materials it offers.
- Clients will use the application to view services and request their appointments.
- The responsible staff will keep the administrative records and product stock up to date.
- Appointment scheduling will depend on the availability of time slots and of the staff performing the treatments.
- The requirements described here are assumed to be stable.
- Sending reminders will depend on the implementation of a suitable notification mechanism.

2.6.Future Requirements

- Integration with messaging platforms within the application to automate communications with clients.
- Online card payments and electronic invoicing.

3. Specific Requirements

3.1.Common Interface Requirements

3.1.1. User Interfaces

The application must be in Spanish and have a clear, organized interface that facilitates access to its main functionalities. Information must be presented in an understandable way so that clients can view services and request appointments, while authorized staff can manage the business's administrative information.

3.1.2. Hardware Interfaces

Computer or mobile device of the business and of the clients. No special hardware is required.

3.1.3. Software Interfaces

The development of Cosmo Click will use the Java programming language and a Maven-compatible build environment, in accordance with the technical configuration established for the project.
For information storage, a local solution or a database will be used, depending on the architecture defined by the development team. It will allow managing the records of clients, appointments, services, products, and inventory.

3.1.4. Communication Interfaces

The system must include mechanisms that facilitate communication between MaGaby Home Spa and its clients, especially for appointment reminders. The communication channel to be used will be defined during the project's development.

3.2.Functional Requirements

Requirement Identification	FR01
Requirement Name	Scheduling and Bookings
Characteristics	Appointment and Calendar Management Module
Requirement Description	The system must allow clients to select a service, available date, and time, automatically recording the booking in a general calendar

Requirement Priority High

Requirement Identification	FR02
Requirement Name	Schedule and Availability Management
Characteristics	Appointment and Calendar Management Module
Requirement Description	The system must allow cosmetologists to configure their available working hours to prevent appointment overlaps.
Requirement Priority High	

Requirement Identification	FR03
Requirement Name	Notifications and reminders
Characteristics	Notification and Reminder Management Module
Requirement Description	The system must send automatic reminders to clients about their scheduled appointments.
Requirement Priority Medium	

Requirement Identification	FR04
Requirement Name	Diagnostic record
Characteristics	Client Diagnostic Record Management Module
Requirement Description	The system must allow cosmetologists to create and view a patient's digital clinical record, including personal information, medical and allergy history, skin type, phototype, and treatments administered.
Requirement Priority High	

Requirement Identification	FR05
Requirement Name	Informational Catalog
Characteristics	Service Catalog Management Module
Requirement Description	The application must display a detailed catalog with information, prices, and features for each service (facial, body, and hair treatments).
Requirement Priority **High**	

Requirement Identification	FR06
Requirement Name	Bank Transfer Payments
Characteristics	Payment and Bank Transfer Management Module
Requirement Description	The system must allow users to make or register payments by bank transfer, including uploading the transfer receipt or transaction confirmation, to confirm appointments.
Requirement Priority **Low**	

Requirement Identification	FR07
Requirement Name	Most Requested Services Report
Characteristics	Service and Product Demand Reporting Module
Requirement Description	The system must automatically generate statistical reports on the services and products with the highest demand.
Requirement Priority **Medium**	

3.3.Non-Functional Requirements

Requirement Identification	NFR01

Requirement Name	Authentication and Security
Characteristics	The system must require account creation and secure login.
Requirement Description	The system must allow users to register and securely log in using their credentials.
Requirement Priority High	

Requirement Identification	NFR02
Requirement Name	Usability and Visual Identity
Characteristics	The user interface must align with the pre-established brand identity of MaGaby HomeSpa.
Requirement Description	The colors we will use are gold, black, and dark colors, also, it will feature an elegant style and has a logo.
Requirement Priority Low	

Requirement Identification	NFR03
Requirement Name	System Interface
Characteristics	The system will present a simple user interface so that it is easy to use for system users.
Requirement Description	The system must have an intuitive and simple user interface
Requirement Priority High	

3.4.Performance Requirements

Requirement Identification	NFR04
Requirement Name	Response time

Characteristics	Performance
Requirement Description	The system must respond within an adequate time to queries about clients, appointments, services, products, and inventory, avoiding delays that hinder the business's activities.
Requirement Priority High	

Requirement Identification	NFR05
Requirement Name	Appointment processing
Characteristics	Performance and efficiency
Requirement Description	The system must process appointment requests and verify the availability of the registered time slots to avoid conflicts between bookings.
Requirement Priority High	

Requirement Identification	NFR06
Requirement Name	Information management
Characteristics	Performance and efficiency
Requirement Description	The system must allow records to be queried and updated without causing inconsistencies in the stored information.
Requirement Priority High	

Requirement Identification	NFR07
Requirement Name	Report generation
Characteristics	Performance and efficiency

Requirement Description	The system must generate the requested reports within an adequate time for the volume of information the business handles.
Requirement Priority High	

3.5.Design Constraints

[TBD – To be defined with the client]: The constraints regarding the interface and design of the application will be specified.

3.6.System Attributes

Reliability: Client, appointment, and inventory data must not be lost in the event of unexpected shutdowns; periodic backups must be kept.

Availability: Available during the business's opening hours.

Security: Protection of the health data in the history and diagnostic records, and staff access according to their role.

Maintainability: Modular code organized in MVC layers, with simple, documented classes and methods.

Usability: Intuitive interface for users without technical training; a new client should be able to request an appointment in under 5 minutes.

Portability: Must run on any operating system with a compatible JDK.

4. Appendices
